Dynamic Filter
Filter MAGs by taxonomy, genome quality, sampling location, and environmental context to define reproducible cohorts across MarMAGs.
Define genome cohort by taxonomic and environmental metadata
Filters
GTDB-Tk Domain
GTDB-Tk Phylum
GTDB-Tk Class
Sample location ocean sea
Sample location IHO sea
CheckM Quality score
Sample depth
Sample temperature
Sample salinity
Sample latitude
Sample longitude
Advanced filters (complementary)
Enable advanced filters (slower)
Enable additional metadata dimensions
Execute cohort filtering
Remove active constraints
Tip: keep this OFF for speed; enable only when you need extra columns beyond the quick filters.
Restore default selection
Reset all filters
Apply Filters
Clear Filters
(b)
Geospatial MAG Explorer
Select spatial drawing tools
Generate geographically constrained subset with multi-region cohort definition
Refine spatial subset with taxonomy
Taxonomy filters (optional)
GTDB-Tk Domain
GTDB-Tk Phylum
GTDB-Tk Class
(c)
Carbon Fixation Pathways
Filter genomes by pathway presence
Manage download selection
Pathway filters
Clear all gene selections
Clear pathway presence filters
Clear current download
Key marker genes (AND within pathway)
Refine pahway selection using key marker genes
Archaea • Wood–Ljungdahl
Bacteria • Wood–Ljungdahl
Calvin–Benson–Bassham (CBB)
Dicarboxylate–hydroxybutyrate (DCHB)
3-HP/4-HB cycle (HPHB)
3-Hydroxypropionate bicycle (3-HPB)
Reductive TCA (rTCA)
Marker gene selection within carbon fixation pathways
